DENON® PROFESSIONAL ANNOUNCES ITS NEXT GENERATION OF SOLID-STATE AUDIO PRODUCTS

— Company unveils intuitive, state-of-the-art digitally-based audio playback solutions for contractors, consultants and system integrators —

ITASCA, IL, June 23, 2009 — Denon® Professional, a leader in digital recording and playback solutions for the fixed installation and education market sectors, introduces its DN-F300 and DN-F400 Solid-state Audio Players. The new players further emphasize the continued growth of Denon Professional, as well as the company's commitment to providing consultants and contractors with digitally-based, solid media products that feature no moving parts, with high reliability and maintenance-free operation under the most challenging conditions.

The DN-F300 and DN-F400 Solid-state Audio Players take audio playback to new levels by implementing stable and reliable solid-state media technology as the source medium. Both products are able to read MP3 files and uncompressed WAV files from SD or SDHC cards (The DN-F300 reads from USB drives as well), which utilize technology that is far more stable and reliable in demanding applications than the "spinning" CD. All of the advanced features that have made Denon Professional famous for broadcast CD playback have been implemented in the DN-F300 and DN-F400. Because of their robust and reliable solid-state media format, the DN-F300 and DN-F400 are ideal for audio playback in a myriad of demanding applications, including Background Music (BGM), Fitness and Aerobics, Message on Hold (MOH) systems, theaters and broadcast.

Housed in a compact 1U-rackspace enclosure, the DN-F300 offers contractors and system integrators a versatile solid-state audio player at an extremely cost-effective price point. The DN-F300 also has IR control and a microphone input, making it perfect for fitness and dance

applications as well as background music playback. Additionally, the mic input has music ducking, which helps for paging in BGM applications. It also features $\pm 12\%$ pitch control, likewise ideal for dance and aerobics/fitness.

Elevated from a standard audio playback device, the DN-F400 is a 1RU, half-rackspace unit designed for background music, message on hold, repetitive messaging, crisis management, or any application requiring audio to be running continuously. The DN-F400 features balanced/unbalanced outputs and is also controllable via RS-232-C and GPIO (General Purpose Input/Output), making it perfect for theme/amusement parks, malls, government facilities such as post offices, police stations, public transportation, hospitals, hotels, restaurants, airports, museums, art galleries or anywhere a repeated audio announcement is needed. Additionally, the optional RC-F400 Remote Controller features a large LCD display and enhances the DN-F400's capability by providing an ergonomically designed, intuitive control unit for instant playback of audio or audio elements (sound effects) via its hot-buttons, making it ideal for live events, radio, television, etc.

"The DN-F300 and DN-F400 represent Denon's next generation of audio playback devices," stated Karl Gustafson, Brand Manager, Denon Professional Products. "These new products were based on direct feedback from contractors and system integrators and provide high-quality, digital audio playback solutions in a 1RU rack format. They are ideal for the fixed installation/sound contracting markets."
