## **DENON® PROFESSIONAL'S NEW DN-F400 SOLID STATE PROFESSIONAL AUDIO SYSTEM ALLOWS SCHOOL SPORTS, THEATER GROUPS AND ADMINISTRATORS TO HIT THE RIGHT BUTTON EVERY TIME**

— From the National Anthem to routine announcements, the DN-F400 system is designed to deliver dependability in critical applications where audio plays continuously or must be triggered at a moment's notice —

— The DN-F400's easy-to-program, easy-to-use design offers intuitive, one-touch operation for quick, easy and error-proof access, making it ideal for schools, restaurants, theme parks and other establishments where multiple users may be required to operate the system —

*INFOCOMM, LAS VEGAS, NV, June 9, 2010* — Every school administrator's nightmare: just before an assembly begins, instead of "The Star Spangled Banner," the auditorium gets a taste of "Welcome to the Jungle." Every college football coach's nightmare: you're on defense and the opposing quarterback takes the snap but the music over the P.A. system continues to play, drawing the home team defenders a 15-yard interference penalty.

These and other common digital disasters can be completely eliminated thanks to the new [DN-F400 / Solid State Audio Playback System](#) from Denon® Professional (booth C6550). From the National Anthem to routine announcements, the DN-F400 system is designed to deliver dependability in critical applications where the audio runs continuously or must be triggered at a moment's notice. From schools, theme parks and shopping malls, to hospitals, hotels, airports and train stations, the DN-F400 is ideal for use in public facilities requiring continuous-playback, repeated-programmed audio messaging or quickly triggered announcements.

The optional RC-F400S Remote Controller features a large LCD display and ergonomically designed control panel, including 20 hot buttons for instant playback of audio or sound effects. When used together, the DN-F400/RC-F400S solid-state audio combo is a powerful and cost-effective alternative to high-priced sound FX playback systems and outdated CART players, CD or Minidisk units for radio, television, sporting events, theater and other real-time performance applications.

“Situations requiring specific files for houses of worship, sound reinforcement, broadcast, the expanding broadcast market of Internet radio, traditional radio, and the smaller stations – any situation where they wouldn’t necessarily spend thousands of dollars on the traditional equipment to do hot starts or a computer system, now has an affordable solution in the DN-F400,” states Peter Papageorge, D&M Professional Director of Sales.

Schools, which have multiple departments, each with their own repeating audio needs, can particularly benefit from the advantages of the DN-F400. Thanks to the DN-F400’s use of the cost-effective SD and SDHC card formats, users can store up to 999 files per 32GB card, and each department can have its own school system content-approved cards that keep their particular audio files ready to play at the touch of a button. And the large LCD display on the RC-400S remote control allows users to clearly name up to 20 files and assign them to hot buttons that will instantly start each audio file from the beginning every time.

“It gives you a lot of flexibility to instantly have a quick catalog for whatever application you need,” says Papageorge. No longer will schools have to take chances on the tiny screen and control wheel of a student’s iPod or MP3 player not lining up with the correct file at a critical moment, or having a primitive boom-box and microphone set-up fail to work. Personal audio players are convenient but far too risky to be relied upon for public use. “In houses of worship, if the thing goes to sleep, the last thing you want [it] to do is wake up and accidentally start [playing] a file during the benediction or the prayer,” says Papageorge. The DN-F400 brings affordable consistency to public announcements, and helps schools maintain compliance with district and state regulations. Louisiana, for instance, requires certain public service announcements be made through the P.A. systems at all school sports events. Instead of lost scripts or damaged discs, the DN-F400 delivers the exact audio needed without fail, every time.

The DN-F400 builds upon the professional quality and innovation that has long made Denon Professional the undisputed leader in innovative audio design, delivering powerful performance in a compact, single RU half-space package. The DN-F400 plays mono and stereo uncompressed WAV (44.1/48kHz) and MP3 files; has an easy-to-operate tape-recorder type control panel; balanced (Phoenix-type) and unbalanced audio outputs; external RS-232c and GPIO controls; bright and easy-to-read OLED display; and simple, intuitive operation. No complex, multi-tiered menus to page through – its rear-panel DIP switches offer simple, one-time setup, with features like Continuous Play with Repeat or Power-On Auto Play modes for hassle-free, dedicated installations, and the DN-F400 is designed for dependable, long-term reliability and performance. With this level of functionality and dependability in a very affordable package, says Papageorge, “The DN-F400 is what schools have been dreaming of.”
